

My name is Tyrone Thomas Wesley. My classification is senior and my major is computer science with a minor in cybersecurity.

I chose this field because I've always been fascinated on how a computer works or what is used to make it do the things they do as far as what applications, software and what goes behind in developing it and making it.

I have quite a few professors that have definitely been helpful to me with Ms. Williams who is my mentor in the computer science department. She she's the person I could go to when I have questions about my courses as well as career options and it makes sure that I'm on the right path to where I want to do. Dr. Wu who teaches the Cisco approved courses on campus allowing me to get my hands into doing network on network administration doing routing configurations as well as _____ configurations.

I know that Fayetteville State is a well diverse school it has clubs and organizations that meet any students' needs. You don't have to worry about getting lost and being just a school with a number. You'll be able to have connections with faculty members as well as um put yourself on a path to be recognised for many things.

I'm proud of to be a Bronco because one of things about Fayetteville State, it has the Divine Nine Greek organization here. We have our clubs opposition that goes with commuting students and veteran students that sometimes get missed when it comes to _____ universities and be they it always puts itself out there to be recognized for the students achievements and success.
