When most people think of a forensic scientist, they think of one of the many television programs that deal with crime scene investigation. However, crime scene investigation is by no means the only occupation available to those interested in solving crimes for a living. The word forensics refers to the process of using science and technology to resolve legal matters in a courtroom. This can involve looking at banking statements for hidden money in a divorce dispute, evaluating computer hard drives to find evidence in a missing person's case or cataloging injuries on the body of a murder victim. Forensic Science applies scientific principles and technological practices for the purposes of justice and resolution of criminal, civil and regulatory issues. FSU offers a Bachelor of Science degree in Forensic Science with a concentration in Biology or Chemistry. For more information, contact the Department of Natural Sciences at 910-672-1650.
