GPA Projection Formula

The following is a GPA Projection Formula used to assist students in setting realistic academic goals. If used properly this formula will give the student an idea of the grades/repeats needed to meet his/her desired cumulative GPA. This data sheet is based on a 4.0 grading scale calculation.

\[
\text{GPA} = \frac{\text{Quality Points}}{\text{GPA Hours}} \text{ (ex. 50 pts. ÷ 15 hrs. = 3.3).}
\]

***Use the following formula to calculate your quality points:

\[
\begin{align*}
A &= 4 \text{ pts} \\
B &= 3 \text{ pts} \\
C &= 2 \text{ pts} \\
D &= 1 \text{ pts} \\
F &= 0
\end{align*}
\]

multiplied by number of credit hours for the course

You may also go to [http://www.uncfsu.edu/registrar/gpacalculator.htm](http://www.uncfsu.edu/registrar/gpacalculator.htm) to calculate your GPA.

CURRENT CUMULATIVE GPA  

DESIRED CUMULATIVE GPA

\[\begin{align*}
\text{PROJECTED Grades} & \quad & \text{Points:} & \quad & \frac{\text{Quality Points}}{\text{GPA Hours}} = \text{Projected GPA}  \\
\text{student} & \quad & \text{grades} & \quad & \text{points}
\end{align*}\]

\[
\text{The above information can be used to assist in setting goals; the grades you earn this semester will be determined by your academic performance and the university grading system.}
\]
