

Okay, my name is Na'Imah Page. I'm a senior here and I'm a biology major.

I chose to major in biology because it's a very interesting field. You get to learn about your body and you know, possibly help others in the future.

I plan to be an anatomical pathologist so I can do autopsies.

I had Dr. Chavis, Dr. Cooper, Mr. Washington and that's about it. They've helped me with the little stuff – financial aid, register for classes, classes I need to take for the following semester.

So for anyone thinking about coming to Fayetteville State, I would tell them there is a friendly environment. There are a lot of friends to meet. There are things to do – experience a whole bunch of things.

As an Early College graduate, I've been here for almost eight years. So I've experienced a little bit here a little bit of that. You know, I've seen new people. I've seen people graduate and get good jobs. So, I've got that Bronco pride going!
