

## The Henry Eldridge Department of Mathematics and Computer Science

### Machine Learning for Manufacturing

**Abstract:** Although many advances in manufacturing have been achieved in recent decades, challenges for high productivity machining remain. Advances in machine learning are creating new methods of using data to enhance the accuracy and reduce waste in this area of engineering. Standard approaches for machining process do not consider the constraints imposed by the process dynamics. For example, some spindle speed-depth of cut combinations will exhibit self-excited vibrations which can potentially damage the tool. In this talk we will review machine learning approaches to solve this and some other related problems.

This project is funded by the UNC Research Opportunities Initiative.

The project page is provided here for additional information:

### Seminar Series Fall 2019

**DATE**

October 24, 2018

**TIME**

2:00—3:00 pm

**PLACE**

LSA 120 - Auditorium

**PRESENTER**

**Dr. Sambit Bhattacharya**

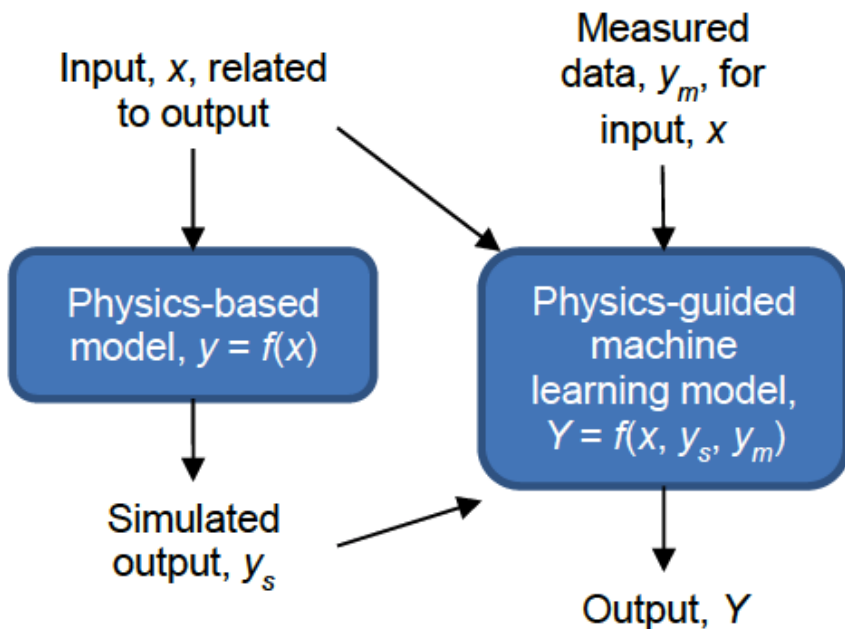

Department of Mathematics  
and Computer Science, FSU

For more information please contact:

Dr. Valentin Milanov

Sci&Tech 408

### Homomorphic Encryption and its Applications

**Abstract:** In this talk, we give the historical perspective and discuss various applications of homomorphic encryption. Homomorphic encryption is an encryption algorithm that allows for computations directly on the encrypted data. We would present different homomorphic encryption models as proposed in the research community. The application of homomorphic encryption in cloud computing has been the focus and therefore, a major part of the paper will be devoted to discussion of security of cloud computing and the attempts made to utilize homomorphic encryption as a model for cloud computing security. We will also briefly discuss potential applications of homomorphic encryption in IoT.

### Seminar Series Spring 2020

#### DATE

January 23, 2020

#### TIME

2:00—3:00 pm

#### PLACE

Sci&Tech Room 229

#### PRESENTERS

**Dr. Daniel Okunbor**, Professor, Department of Mathematics and Computer Science, FSU

**Dr. Chekad Sarami**, Associate Professor, Department of Mathematics and Computer Science, FSU

For more information please contact:

Dr. Valentin Milanov

Sci&Tech 408
